

This file should compile with knit2pdf() without any modifications. This is here to test support for legacy files (i.e., nothing is broken).

```
A <- list(x=3772, y="Rnw")
A
## $x
## [1] 3772
##
## $y
## [1] "Rnw"
```

Inline code: A=3772.

Now some math:

$$1 + 1 = 2$$

$$\alpha + \beta = 5$$

Closing text.
